TOMUS LVI—1992—56. KÖTET

Abujabal, H. A. S., On commutativity of left s-unital rings ..... 51— 62
Althoen, S. C.—Hansen, K. D., Two-dimensional real algebras with zero divisors ..... 23— 42
Alzer, H., On an integral inequality for concave functions ..... 79— 82
Athavale, A., Relating the normal extension and the regular unitary delation of a subnormal tuple of contractions ..... 121—124
Barnes, B. A., Linear operators with a normal factorization through Hilbert space .... 125—146
Barria, J., Strongly dense simultaneous similarity orbits of operators ..... 169—174
Brešar, M., On the composition of (α, β)-derivations of rings, and applications to von Neumann algebras ..... 369—375
Chajda, I., Algebras and varieties satisfying the congruence extension property ..... 19— 21
Chan, Jor-Ting, A note on compact weighted composition operators on $L^p(\mu)$ ..... 165—168
Cho, M., On the joint Weyl spectrum. III ..... 365—367
Czédli, G., Some nontrivial implications in congruence varieties ..... 15— 18
Dauns, J.—Fuchs, L., $\varkappa$-products of slender modules ..... 205—213
Dudek, J., On Csákány's problem concerning affine spaces ..... 3— 13
Estérle, J.—Zarouf, F., Compatibility and incomgatibility of Calkin equivalence with the Nagy-Foiaş calculus ..... 359—363
Feigelstock, Sh.—Muskat, J. B., On the additive groups of m-rings ..... 43— 45
Fuchs, L., cf. Dauns, J. ..... 205—213
Gauchman, H., Basic cohomology classes of compact Sasakian manifolds ..... 269—285
Gou, Z. R.—Zhou, D.-X., Approximation theorems for modified Szász operators ..... 311—321
Hansen, K. D., cf. Althoen, S. C. ..... 23— 42
Indlekofer, K. H.—Kátai, I., Estimation of generalized moments of additive functions over the set of shifted primes ..... 229—236
Kátai, I.—van Rossum-Wijsmuller, M., Additive functions satisfying congruences ..... 63— 72
Kátai, I., cf. Indlekofer, K.-H. ..... 229—236
Kirkovits, M. Sz., On equivalence of two variational problems in k-Lagrange spaces ... 73— 78
Kumar, A., Composition operators ..... 335—345
Ky, N. X., On an imbedding theorem ..... 115—120
Leindler, L., On the generalized strong de la Vallée Poussin approximation ..... 83— 88
Leindler, L., A note on the strong de la Vallée Poussin approximation ..... 287—291
Leindler, L., On strong approximation by Cesaro means of negative order ..... 293—303
Leindler, L.—Meir, A., An additional note on strong approximation by orthogonal series ..... 89— 95
Levizov, S. V., On the central limit theorem for series with respect to periodical multiplicative systems. II ..... 329—334
Meir, A., cf. Leindler, L. ..... 89— 95
Muskat, J. B., cf. Feigelstock, Sh. ..... 43— 45
Nagy, P. T., Moufang Lie loops and homogeneous spaces ..... 259—267
Nakazi, T., ϱ-dilations and hypo-Dirichlet algebras ..... 175—181
Németh, Z., On the generalized absolute summability of double series ..... 97—114
Paul, Y., On rings satisfying $(x, y, z)=(y, z, x)$ ..... 47— 49
Pačarić, J. E.—Raşa, I., On Jessen's inequality ..... 305—309
Pekarev, E. L., Shorts of operators and some extremal problems ..... 147—163
Phong, B. M., On a theorem of Kátai-Wirsing ..... 237—247
Phong, B. M., On additive functions with values in a compact Abelian group ..... 249—258

Pukanszky, L., On the coadjoint orbits of connected Lie groups ..... 347—358
Raşa, I., cf. Pečarić, J. E. ..... 305—309
van Rossum-Wijsmuller, M., cf. Kátai, I. ..... 63— 72
Szabó, L., Idempotent algebras with transitive automorphism groups ..... 215—222
Vármonostory, E., Central pattern functions ..... 223—227
Zarouf, F., cf. Esterle, J. ..... 359—363
Zhou, D.-X., cf. Gou, Z. R. ..... 311—321
Zhou, S. P., On the divergence phenomena of the differentiated trigonometric projection operators ..... 323—328

Bibliographie

Algebraic Logic and Universal Algebra in Computer Science. — Analysis III. — B. Andrásfai, Graph Theory: Flows, Matrices. — D. K. Arrowsmith—C. M. Place, An Introduction to Dynamical Systems. — Bernard Aupetit, A Primer on Spectral Theory. — Joseph A. Ball—Israel Gohberg—Leiba Rodman, Interpolation of rational matrix functions. — Bifurcation and Chaos: Analysis, Algorithms, Applications. — Böhme, Analysis 1. — P. Concus—R. Finn—D. A. Hoffman, Geometric Analysis and Computer Graphics. — M. Coorneart—T. Delzant—A. Papadopoulos, Géométrie et théorie des groupes. — C. Corduneanu, Integral equations and applications. — CSL'89. — Effective Methods in Algebraic Geometry. P. A. Feser—D. A. Simovici, Mathematical Foundations of Computer Science — C. A. Floudas—P. M. Pardalos, A Collection of Test Problems for Constrained Global Optimization Algorithms. — Functional-Analytic Methods for Partial Differential Equations. — I. M. Gel'fand—E. G. Glagoleva—E. E. Shnol, Functions and Graphs. — B. Golubov—A. Efimov—V. Skvortsov, Walsh Series and Transforms. — The Grothendieck Festschrift. — Martin C. Gutzwiller, Chaos in Classical and Quantum Mechanics. — Werner Heise—Pasquale Quattrocchi, Informations- und Codierungstheorie. — J. H. Hubbard—B. H. West, Differential Equations. — J. E. Humpheys, Reflection Groups and Coxeter Groups. — A. E. Ingham, The Distribution of Prime Numbers. — Bernd Jähne, Digitale Bildverarbeitung. — N. Korneichuk, Exact Constants in Approximation Theory. — Logic and Computer Science. — Mathematical Foundations of Programming Semantics. — Mappings of Operator Algebras. — Mircea Martin—Mihai Putinar, Lectures on Hyponormal Operators. — Jean Mawhin—Michel Willem, Critical Point Theory and Hamiltonian Systems. — Nonlinear Analysis and Applications. — Wlodzimierz Odyniec—Grzegorz Lewicki, Minimal Projections in Banach Spaces. — Operator Algebras. Unitary Representations, Enveloping Algebras, and Invariant Theory. — Paradoxa Klassische und neue Überraschungen aus Wahrscheinlichkeitsrechnung und mathematischer Statistik. — H.-O. Peitgen—E. Maletsky—H. Jürgens—T. Perciante—D. Saupe—L. Yunker, Fractals for Classroom: Strategic Activities. — A. M. Perelomov, Integrable Systems of Classical Mechanics and Lie Algebras. — M. H. Protter—C. B. Morrey, A First Course Calculus in Real Analysis. — László Rédei, Endliche p-Gruppen (Finite p-Groups). — Arto Salomaa, Public-Key Cryptography ..... 183—203

K. ANDERSEN, Brook Taylor's Work on Linear Perspective. — R. R. AKHMEROV—M. I. KAMENSKII—A. S. POTAPOV—A. E. RODKINA—B. N. SADOVSKII, Measures of Noncompactness and condensing Operators. — R. BALIAN, From Microphysics to Macrophysics, Vol I. — P. BAMBERG—S. STERNBERG, A course in mathematics for students of physics. — T. BANCHOFF—J. WERMER, Linear Algebra Through Geometry. — DAVID M. BRESSOUD, Second Year Calculus. — Commutative Harmonic Analysis I., — Delay Differential Equations and Dynamical Systems. — F. DIGNE—J. MICHEL, Finite Groups of Lie Type. — L. R. FOULDS, Graph Theory Applications. — J. LINDENSTRAUSS—V. D. MILMAN, Geometric aspect of Functional analysis. — E. HAIRER—G. WANNER, Solving Ordinary Differential Equations II., — Y. HINO—S. MURAKAMI—T. NAITO, Functional Differential Equations with Infinite Delay. — I. S. HUGHES, Elementary Particles. — ARTHUR JONES—SIDNEY A. MORRIS—KENETH R. PEARSON, Abstract Algebra and Famous Impossibilities. — H. JÜRGENSEN—F. MIGLIORINI—J. SZÉP, Semigroups. — FRANCES KIRWAN, Complex Algebraic curves. — HELMUTH KOCH, Introduction to Classical Mathematics I. — BERNHARD KORTE—LÁSZLÓ LOVÁSZ—RAINER SCHRADER, Greedoids. — P. LATIOLAIS, Topology and Combinatorial Group Theory. — STANISLAW LOJASIEWICZ, Introduction to Complex Analytic Geometry. — Mathematik, Realität and Asthetik. — Matroid Applications. — PETER MAEYER—NIEBERG, Banach Lattices. — Microlocal Analysis and Nonlinear Waves. — Miscellanea Mathematica. — Numerical Methods for Free Boundary Problems. — JAN OKNINSKI, Semigroup Algebras. — ROBERT E. O'MALLEY, Jr., Singular Perturbation Methods for Ordinary Differential Equations. — BRUCE P. PALKA, An Introduction to Complex Function Theory. — Prospects in Complex Geometry. — S. PRÖSSDORF—B. SILBERMANN, Numerical Analysis for Integral and Related Operator Equations. — JEFFREY RAUCH, Partial Differential Equations. — REINHOLD REMMERT, Funktionentheorie II. — Representation Theory of Finite Groups and Finite-Dimensional Algebras. — Y. S. SAMOILENKO, Spectral Theory fo Families of Self-Adjoint Operators. — W. M. SCHMIDT, Diophantine Approximations and Diophantine Equations. — J. B. SEABORN, Hypergeometric Functions and Their Applications. — V. A. SMIRNOV, Renormalization and Asymptotic Expansions. — ANDRÉ WEIL, The Apprenticeship of a Mathematician. — ANATOLY A. ZHIGLJAVSKY, Theory of Global Random Search. ..... 377—399
